PITCH DAY · TEAM VERSION

loop. who does what

Simple version so everyone knows their part. Everyone speaks once: Beatriz opens, explains CAC and LTV, and closes; each teammate presents the part they own. No financial projections in the deck (professor's instruction). Total talk time ≈ 4:00, then questions. Full words in the script PDF.

Beatriz opens, CAC & LTV, closes · **Noor** live demo · **Ferdinand** solution · tech Q&A · **Bianca** market & competition · **Marcelo** team · logistics · **Dalya** traction · notes · **Ghaya** go-to-market · timer

before we go on

WHO	JOB
Beatriz	Runs one last timed run-through; has the deck open in Present mode
Noor	Phone charged, mirrored to the screen, studywithloop.github.io/app/ open on the demo feed
Ferdinand	Second phone ready with the same page, in case Noor's fails
Marcelo	Laptop, charger, clicker, HDMI/adapter; deck downloaded as PDF as a backup
Ghaya	Timer ready; final check of slide text and colours
Dalya, Bianca	Know your numbers by heart (traction; market and sources)

the script, slide by slide

#	TIME	SPEAKS	KEY LINE	Q&A BACKUP
0	0:00	**Beatriz**	"We turn the time students already spend scrolling into time spent studying their own courses."	—
1	0:10	**Beatriz**	A real story, then: "we only review when exams force us to."	Dalya
2	0:45	**Ferdinand, then Noor (demo)**	"Your course, as a 5-minute feed." **Noor: 20-second demo**: a card, a quiz, a wrong answer, swipe to reinforce.	Ferdinand
3	1:25	**Dalya**	"15 organic sign-ups, 7 testers, 3/5 on version 0.1, and we know what to fix."	Dalya
4	1:50	**Beatriz**	"CAC is what it costs to win a faculty, ≈ €10k. LTV is what it brings, ≈ €35k over 3 years. 3.5 to 1. Students alone don't clear it, so the free app is our channel."	Marcelo
5	2:30	**Ghaya**	"One class at a time: class groups, ambassadors, professor pilots, then licences."	Ghaya

6	2:55	**Bianca**	“IE, then 1.88M students in Spain, 19.1M in the EU. Others need prompts or don’t know your course.”	Bianca
7	3:25	**Marcelo**	“Why us? We are the users.” Team on the slide; everyone smiles.	everyone
8	3:45	**Beatriz**	“Every course. 5 minutes a day. Cool kids stay in the loop.” Stop at 4:00.	—

during the pitch

- **Ghaya** shows a discreet signal at 3:00 (“one minute left”) and at 4:00 (“stop”).
- **Hand over by name** (“Ferdinand will show you what we built”) and walk up as the previous speaker finishes.
- **Dalya** writes down every question and comment from the professor and the class.
- Everyone else: stand together, look at the audience, no phones except Noor and Ferdinand.

questions: who answers

TOPIC	ANSWERS	SHORT ANSWER
Why not ChatGPT / NotebookLM?	**Beatriz**	No prompts, knows your course, recall and review built in
Is the AI content accurate? How is it built?	**Ferdinand, Noor**	Only uses the uploaded material; every card links to its slide or timestamp; professor approval
Market size, competitors, professors	**Bianca**	Bottom-up market with official sources (Eurostat, Ministry, IE); professor pilots next
Pricing, selling to universities	**Marcelo**	Free pilot term, then a one-year faculty licence under €15k (€10 per student); private universities first
Will students keep using it?	**Dalya**	Biggest risk; we measure week-2 return and run a 48-hour recall test
How will you get users?	**Ghaya**	Class groups, QR stickers, Instagram, ambassadors
CAC, LTV; if asked about funding	**Beatriz**	Faculty 3.5:1, students 0.3:1. Projections and funding are in the business plan, not the deck; answer only if asked

Afterwards (same day): Dalya posts the questions and feedback in the team repo (docs/PITCH.md); everyone turns them into tasks on the board.
